

GPS- device while hiking: Useful basic funktionen + how to fix eventual problems

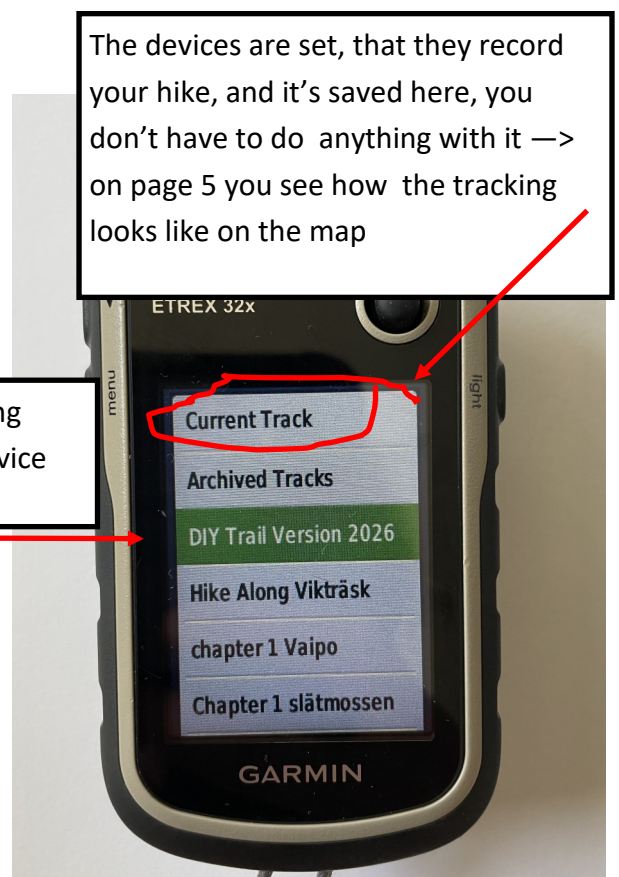

Less light saves battery, the devices are set that they turn to battery save mode (display goes off), after 15 seconds

-  On/off & change display light by clicking button again & check battery
-  Cursor for map and menu
-  Going „back“ in the menu & back to your current position (blue arrow)
-  Zooming in and out on the map

Here you find the hiking trails, saved on the device

The devices are set, that they record your hike, and it's saved here, you don't have to do anything with it —> on page 5 you see how the tracking looks like on the map

If you read "hide on map", the track is VISIBLE on the map

If you read "show on map" the track is HIDDEN on the map

Here you can set for every track that is saved on the device a color

So if you cannot see the trail, when turning on your device, you can check this in the menu. It changes by clicking on it Sometimes you just have to wait a bit, they are slow :)

Here you find the waypoints, what are saved on the device.

Here you can change the names and symbols etc

You can also save more waypoints (before or while hiking)

GPSmap 62s: cursor on the place you want to save on the map, than click "mark"

E-trex: cursor on the map —> click on the place, then click the button "menu", then you can save it as a waypoint.

Delete waypoint: Klick on the waypoint, then button menu, then you can chose "delete"

By moving around with the cursor on the map and zooming in or out, you can not only check the route/terrain, but you will also see the straight distance from your own location (blue arrow) towards the white cursor. Especially off-trail this can be helpful, when you move on the direction you can see if the amount of meters is getting less or more. If you have moved the cursor, the map section you see on the display will stay the same while you walk. If you click "back"/"out", the map jumps again to your current location and also "follows" you while you walk.

If you click with the cursor on the map more often it will draw a straight line to this point, what could help (suuntaviiva in karttaselain). Sometimes this might happen accidentally when the GPS is in the pocket of your jacket —> so you need to know how to stop it :)

Stopping the “straight line navigation” with Etrex:

—> Menu —> where to? —> stop navigation

Stopping the “straight line navigation” with GPS map 62:

—> Find —> stop navigation

➡ If you suddenly notice that the terrain map is missing or also the trails, you can check, if the memory card slipped a bit "out". Open the device and take out the batteries, you can move the small metal holder up and down (open/close). If it's the case that it accidentally opened, the map information what is saved on the memory card doesn't show any more of course. So close it and turn the device on again.

The picture below shows how it looks like, when the problem is fixed.

➡ The pink trail line is here the trail and you can see also a bright blue line, this is the line, what is tracking your hike. You not only see while hiking, where you came from, but you can upload the track after you hike on your computer. I will do that for you :)

**ALWAYS TRY TO REMEMBER
TO TURN OFF IMMEDIATELY
THE GPS DEVICE WHEN YOU
REACHED YOUR SLEEPING
SPOT :)**

How to share your sleeping spots with the others + save the other sleeping spots

6. To save the spot from the others, click on the link —>

(you can also save your own this way, or just do it with the “tallenna” button in the app directly)

7. Click “Ava sovelluksessa”

8. it opens up in the app —> Click on “tallenna”

9. you can change the name to for example “tent Mia” (shared sleeping spots in the evening, this way you will have your own and the spots from the others in the map of the karttaselain app)
